

ALEX AUMAIS

aaumais@uwaterloo.ca | [LinkedIn](#) | [GitHub](#) | [Portfolio](#)

SKILLS

Languages: Python, C, C++, TypeScript, Java, C#, Solidity (Ethereum)

Technologies: Google Cloud Platform, Kubernetes, SQL, Matplotlib, NumPy, Pandas, Flask, GraphQL, Prisma

Tools: Git, Jupyter, Metabase, Figma, Postman, Docker

Other: Technical Writing, Project Management, 3D Printing, Videography and Editing

EDUCATION

University of Waterloo

2023 - Present

Bachelors of Software Engineering

Waterloo, Canada

- **Overall GPA: 4.0.** Relevant courses: Data Structures and Algorithms (C and C++)
- VP Events Software Engineering Society, Software and Media Lead for Waterloo Rocketry Team, Residence Life Don

EXPERIENCE

Developer Advocate and Content Creator for Growth

Mar 2024 - Present

Voiceflow

- **Initiated and led our new 2.0 public docs** revamp, improving clarity, organization and writing new articles, to 4x traffic
- Developed custom AI interfaces, applications with Voiceflow's Conversational APIs using **Python, JavaScript, React, and Unity**
- Collaborated cross-functionally with Growth, Marketing, Product and Engineering teams to share new insights with developers, producing videos, each reaching thousands of viewers, on **AI, LLMs** and building great Agents

Backend Software Developer

Mar 2024 - Present

Hack the North

- Took action to improve documentation, wrote PRDs, negotiated features with other developers, teams, and PMs
- Owned innovative solutions to improve the event experience using GenAI to answer participant's questions accurately and fast
- Sped up load times by **90x** by designed and developed new **GraphQL endpoints** in **TypeScript** for Canada's largest hackathon
- Created data analysis reports of event metrics, using Metabase, helping the logistics team make data-driven decisions
- Performed **platform on-call maintenance** using log analysis on the **Google Cloud Platform** to diagnose and resolve incidents

Human-Computer Interface Research Intern

July - Sept 2023

Tech3Lab, HEC Montreal

- Spear-headed an innovative research project on the intersection of rehabilitation, **virtual reality**, and user experience
- Programmed **data analysis** tools in Python using **matplotlib** and Jupyter Notebooks to uncover trends in participant behaviour
- First author for an academic paper **submitted to CHI 2024**, presenting key findings and research outcomes

Broadcast Infrastructure Developer and Event Producer

Jan 2021 – Sept 2023

Celeste Community

- Re-wrote and **object-oriented 3,700** lines of code for a video production stack in **Python**, enabling scalability improvements
- Producer and event organizer, raising over **\$40,000** for trans-rights charities by putting on **marathon events**
- Designed robust and **crash resistant** code to reduce production interruptions by **80%**

PROJECTS

Charity Raffle | *Typescript, React, Solidity, Pytest, Heroku*

[Portfolio](#)

- Developed an **Ethereum smart contract** backend, to buy raffle tickets, randomly select winners, and donate to charities
- Created a **dynamic single page app** in Typescript with React to interface easily with the smart contract
- Followed **test-driven development** with **100% code coverage** for the backend methods through a Pytest suite

Preservia.tech | *Python, Flask, ChatGPT API, MediaPipe*

[DevPost](#)

- Developed a web application at Hack the North 2023 using Flask with 5 custom written webpages and forms in HTML
- Image recognition system using Google's **MediaPipe** to identify and name perishable items

Snowfake (winner of Trophés de la NSI) | *Python, pygame, Git*

[GitHub](#)

- Wrote a **technical explanation** document to pitch our project, and won **1st place** in the French national Trophés de la NSI
- Collaborated with friends to develop a **snowflake simulator** in Python, using Git
